Quiz-2 [CLO-2]

Create a web server using express JS. Create a route to get all data from a file /server using the REST API / and the endpoint /api/users. Also create a route to send data to the server / file through request body using Postman to create a new book object. Suppose you have a json file having 3000 objects. Each object contains the following properties:
id
bookTitle
authors
publisher
year
